

Protect Your Home

With our Surge Protection Program

Why Add Surge Protection to your home?

According to the National Oceanic and Atmospheric Administration, the United States averages over 100,000 thunderstorms per year, producing over 25 million cloud-to-ground lightning strikes!

While there's no device that will protect against all power surges, Three Rivers Electric Cooperative's surge protection program can reduce your chances of surge or lightning damage. The product manufacturer also offers a superior warranty if lightning damage does occur and the protection device fails for up to ten years from the date of purchase. That means no homeowner's deductible and no insurance claim for damaged appliances.

Our program helps shut the door on one route that lightning can use to get into your home – our electric lines. You will additionally want to purchase plug-in surge devices for your sensitive electronics such as televisions and computers.

Meter Base Protection

Meter Base protection helps buffer your electrical system from lightning and insures “white goods” such as electric washers, dryers, freezers, refrigerators, dishwashers, and most other appliances are protected. LED indicator lights let you know when the device has “taken” a surge.

TES 240R

Protection is available for single-phase residential and light industrial usage. Other protection for three-phase service can be ordered as requested.

Meter Base protection is a one-time charge, which includes installation. Three Rivers will maintain and replace the device at no cost if the unit fails during the warranty period.

Give your home the protection it deserves!

Three Rivers Electric Cooperative can only honor manufacturers' equipment warranties and is not responsible for events or fluctuations in your electricity beyond our control. Please read the warranty information supplied with the equipment for specific details. Warranty coverage is applicable only when the installed Surge Suppression Device 1) is active and fully functional immediately before any event occurs that would result in a damage claim, and 2) the equipment must have sustained damage as a result of the event.
